

Digital Technologies Driving Smart Cities

Menna Kamel / Digital Engineering Course

WHAT IS A SMART CITY?

-  Uses technology and data to improve quality of life
-  Integrates urban systems: transport, utilities, buildings
-  Enhances efficiency, sustainability and citizen engagement

Smart City Solutions

Data-driven decision making

Real-time monitoring of city infrastructure

Sustainable resource management

Citizen-centric services

Impact of Digital Technologies (BIM, GIS, ML)

BIM

**Collaborative 3D Building Design
& Data**

GIS

**Geospatial Mapping
& Analysis**

ML

**Predictive Modeling &
Optimization**

IOT and Building Operations

- IOT = network of connected sensors and devices
- Smart meters, HVAC sensors
occupancy detectors
- Enables predictive maintenance and energy optimization

Digital Twin Solutions

Benefits for City Management

Faster, evidence-based decisions

Reduced costs & improved maintenance

Greater sustainability & resilience

Enhanced citizen satisfaction

Conclusion

Smart cities = digital + data + people

BIM, GIS, ML, IOT & Digital Twins = core pillars

Future = more connected, sustainable, and liveable cities
